

THE Solution for - PACS Reporting • PACS Monitoring • HIPAA Logging

PACSHealth™ is an interactive and intuitive browser-based solution that ensures optimal performance of your PACS

- A customizable centralized **dashboard** with real-time monitoring of system and database status – not available with your current PACS
- Isolation and notification of database inconsistencies and errors – **before there is an impact to the patient/physician experience.**
- Easy access to system transactional audit logs providing evidence of **Who, What, When and Where.**
- System reports are generated quickly and accurately - reducing turnaround time, unnecessary oversight and increasing data integrity.
- **Real-time email alert messages via PACSHealth Alerts™**

With PACSHealth™, I finally have an easy way to monitor our PACS system 24/7. I can rest assured that system data is clean and consistent across the board and errors, if any, are quickly repaired. I can do my job in a fraction of the time that it used to take with better results.

– Scottsdale Medical Imaging Ltd

"Simply stated, PACSHealth has been a godsend. HIPAA auditing, workstation utilization, identification of possible duplicate patient records, all are a breeze. Most reports can be exported to XML, Excel and other formats. It's been a great tool for us, and I wouldn't want to go back to working without it."

– Kip Henry,
 PACS Administrator
 Oklahoma City, OK
