

Company Overview

Heart disease has become a global epidemic, and it is the leading cause of death in the United States. Heart disease alone costs the United States \$108.9 billion each year. This total includes the cost of health care services, medications, and lost productivity. Cardiac MRI (CMR) is a non-invasive technique that can reduce the number of diagnostic procedures, and can result in faster detection, and fewer repeat examinations for patients. CMR is considered the most accurate and reproducible tool for functional analysis of the heart and is considered a first-line imaging modality for many clinical indications.

Like many complex imaging modalities, CMR requires additional analysis once images have been acquired. Precision Image Analysis (PIA) is an innovator in post-processing analysis for both research and clinical applications. PIA offers a cloud-based service that takes the burden of post-processing off of your staff with consistent and reliable results.

PIA's technical team has processed thousands of cases from centers around the world. PIA's analysis protocols are designed to maximize both accuracy and reproducibility, with quality being comparable to the most precise published standards. We help your radiology department align with Accountable Care Organizations (ACO) goal, by managing costs, efficiency and increasing throughput.

PIA's Quality Management System and ISO 9001:2008 certification is applicable to all facets of its operations – the analysis of images and remote image post-processing analysis service for use in diagnostic medical studies, including CT and MRI, as well as analyzing images in support of clinical research, the provision of core lab services.

MANAGE COSTS, EFFICIENCY & THROUGHPUT

- Increase MRI and CT scanner throughput
- Reduce or eliminate image analysis time
- Save money on expensive analysis software
- Easy implementation with minimal impact to the IT department

Cloud-based Option for Remote Post-processing:

Quality Policy Statement

Precision Image Analysis (PIA) provides accurate, precise and actionable analysis to physicians. PIA's analysis uses analysts trained to the highest clinical standard available, based on the most advanced scientific findings. We call this combination of scientific foundation and most advanced training certification our Gold Standard of Service, which is the same for all clients.

PIA provides services based on client needs, including customization, complete privacy, defect free image transmission and rapid response.

Mary-Pierre Waiss - President, CEO and Co-Founder

What Our Users Are Saying

“As we researched solutions for post-processing analysis, we discovered Precision Image Analysis (PIA). PIA is a vendor independent remote image post-processing analysis service for MRI and CT studies.

For our practice, the advantages of using PIA was that we would be able to immediately begin scanning patients and have access to results of quantitative analyses.

We did not need to purchase vendor software and did not need to spend the time and resources to train personnel on its use.”
