# ALTAMONT SOFTWARE

# CONNECTIVITY PLATFORM

**Elevate your imaging enterprise with the Altamont Connectivity Platform.**

All of Altamont's next generation connectivity apps are designed from the ground up to provide enterprise level integration, security, configuration, authentication, logging and auditing functions. Whether its connecting photos to the EHR, scanning clinical documents, importing outside CDs, creating DICOM media to share or orchestrating your PACS workflow Altamont's Connectivity Platform will take your imaging enterprise to new heights.

# WHY A CONNECTIVITY PLATFORM IS NEEDED

From our vast experience, we found that many of the same problems would arise again and again with existing connectivity applications. These issues include:

- Machine by machine installation, configuration, and upgrades are required

- Lack of encryption (Security as an afterthought) ran rampant

- No centralized audit trails

- No centralized logging

- Confusing or restrictive license and pricing schemes

- Poor integration with EHR

With these issues in mind Altamont has created the Altamont Connectivity Platform to give users the features they deserve and expect from any enterprise level solution.

# PLATFORM BENEFITS

**Integration**
- Ability to create links in the EHR for all uploaded and captured images
- Robust and easy to configure HL7, DICOM, FHIR and web services
- Launch platform apps with patient context directly from any EHR or PACS

**Security**
- Strong data encryption for all data at rest, and for any data transmission

**User Interfaces**
- Zero Footprint user interfaces

**Configuration**
- No per-station configuration required
- Hardware upgrades or swap without reconfiguration
- Authentication
- Enforce local security policies
- Standards based LDAP capabilities
- Group policies enable application as well as administration access

**Licensing**
- Local MAC based licensing not required
- Eliminate the overhead of managing keys
- Enable new features through single licensing interface

**Auditing**
- Single, central location for reviewing HIPAA audit information
- IHE standard compliance allows Altamont audit to be used for all enterprise applications
- Incidence dashboard flags unusual behaviors

# One Powerful Platform, Many Amazing Apps

A full range of connectivity apps are available on the Altamont Connectivity Platform which provides users centralized tools to integrate any image into your EMR or other enterprise systems. All apps are zero footprint so you can use them anywhere in the enterprise on any PC or device.

**CaptureWare –**
A zero footprint connectivity app to import documents, studies & images to your PACS or EMR.

- **Scan**
  Easily scan any related clinical paperwork directly into any imaging study. Automated Modality Worklist lookup using Barcodes or OCR.
- **Photo Upload**
  Upload photos, PDFs, or any other clinical files from any depart-ment in the hospital directly into your EHR or PACS.
- **CD Import**
  A simple, robust app to import outside DICOM CDs and studies.
- **Print to DICOM**
  A virtual print driver that allows you to print any document directly into your EHR or PACS.

**Image Inbox -**
A powerful time saving tool to streamline import of outside exams and automatically update patient and study demographics.

**MPPS Enterprise -**
Provides MPPS messaging for every modality in your enterprise. Update and close studies in your EHR or RIS from one centralized application.

**Outbox –**
An enterprise DICOM media creation app, allowing you to burn CDs anywhere in your imaging enterprise.

- Burn your CD/DVD from any desktop in your facility, no client software install required
- Chose any burner on your network
- Supports any DICOM viewer and provides tools to customize your media
- Centralize labels, analytics, audits and configuration
- Handles large Hologic HD Tomo studies

**Passport –**
Controls and directs the workflow for your imaging enterprise with the following modules:

- **Router -** Flexible and reliable DICOM image routing solution for the enterprise. Includes powerful rules and tag morphing features.
- **Pre-Fetch -** Prefetch every study so they are available where and when you need them.
- **SR -** Receives DICOM SR measurements and seamlessly auto-fills your Nuance 360 and MModal templates.
- **Worklist -** Brokers all the modality scheduling information to your modalities. Supports POCUS workflow.
- **Sync -** Ensure your PACS and VNA always have the same content.

**About Altamont Software**

Altamont Software develops leading edge medical image connectivity software. Altamont's next generation applications are designed from the ground up to provide enterprise level deployment, management, security and auditing functions. These critical features comprise Altamont's image connectivity platform which serves as the cornerstone for our full line of medical imaging products.
