Incidental Lung Nodules

Ensure Patients Receive the Timely Care They Need

80% of lung nodules are found through incidental findings and not lung screening!

Be sure all patients with incidentally identified lung nodules receive the timely and appropriate follow-up care they need and deserve.

Discovery360 and **ActKnowledge** can streamline and automate the process of finding patients with incidental lung nodules that may be lost to care in your EHR. We can also proactively ensure that all new radiology reports that include aspects of an incidental lung finding are identified and incorporated into our workflow that streamlines the follow-up process.

Significant Differentiators:

- Exclude cases that don't need follow-up
- Stratify patient by follow-up risk
- Automate patient management and follow-up

Discovery360 is a multi-phase workflow solution that powers the identification, follow-up, and coordination of treatment for at-risk patients.

KEY BENEFITS

Illuminate helps integrated care organizations:

- **Improve Patient Outcomes** with targeted and rapid follow-up
- **Understand and Manage Progress** towards organizational improvement
- **Increase Revenue** from incremental imaging, testing, and surgery
- **Reduce Medico-Legal Risk**

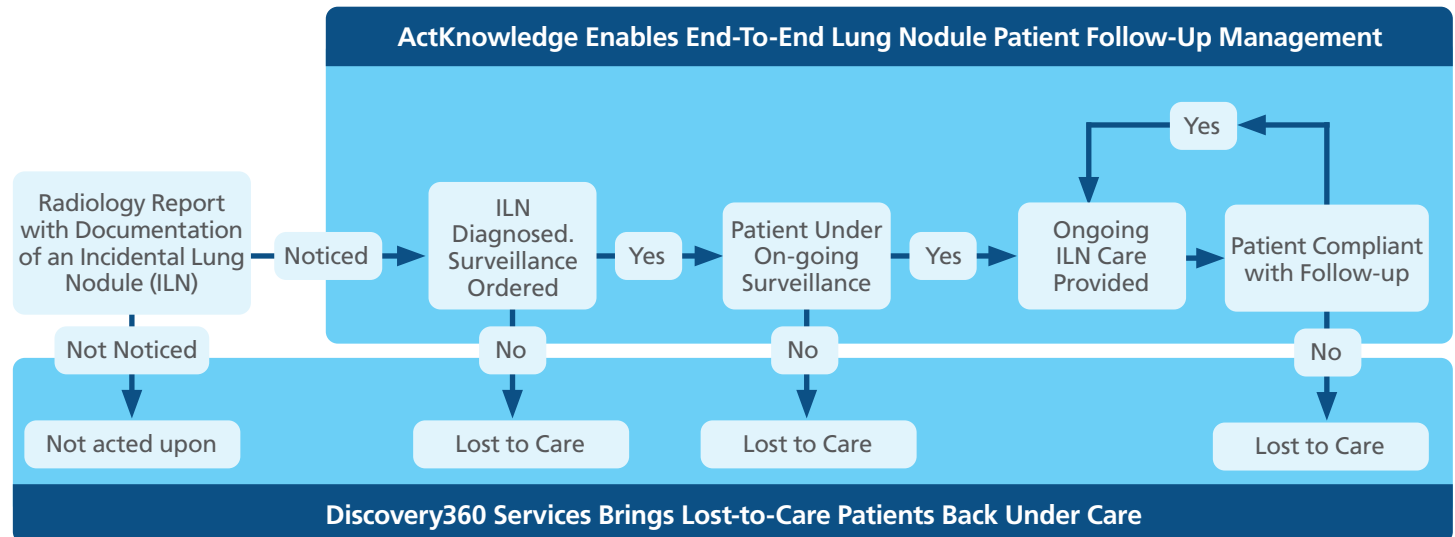

“One of the biggest nightmares for any physician is when they have to tell a patient that their advanced stage lung cancer was actually found on a previous CT scan, when the cancer was at a much earlier stage and could have been cured.”

Dr. Greg Lemense
Interventional Pulmonologist

Two-thirds of Patients with Incidental Lung Nodule Findings Do Not Get the Follow-Up Care They Need.

AUTOMATED INCIDENTAL LUNG NODULE FOLLOW-UP WORKFLOW: Not Staff or Patient Dependent

Our AI powered NLP:

- **Ensures** patients with incidentally found lung nodules are not lost to follow-up
- **Monitors** for new clinical information that can inform and automate patient follow-up
- **Maximizes** nurse navigator productivity with automation and closed-loop communication

Benefits Across the Healthcare Organization

PULMONOLOGIST/ONCOLOGIST

- Facilitate chart review to quickly understand the patients risk factors and clinical history
- Shorten the time to patient diagnosis and treatment

RADIOLOGISTS

- Reinforce their role in both diagnosing and capturing incidental findings and ensure follow-up imaging is performed

PRIMARY CARE PHYSICIAN

- Help primary care doctors deliver more efficient, optimized care for their patients

CFO/COO/CMIO

- Increased downstream revenue from oncology, surgery, and radiation oncology
- Incremental treatment & imaging revenue enables 3-5 month ROI

QUALITY IMPROVEMENT AND RISK MANAGEMENT

Further establish your hospital as being:

- Proactive in maximizing patient care
- Mitigating medical legal risk
- Eliminating potential professional liability claims from missed diagnoses.
