METRASENS ULTRA WITH XACT ID™

See the Unseen in the MRI Suite

MRI SAFETY

IMPROVE THE EFFICIENCY AND RELIABILITY OF YOUR PATIENT SCREENING PROCESS

Despite careful and compliant screening procedures, small ferrous objects on or inside a patients' body can go undiscovered and cause a variety of risks for MRI facilities. From degraded image quality, delays and interruptions, to patient injuries. That's why, adding a sensitive, feature-packed ferromagnetic detection system to your patient screening process is a best practice in MRI safety.

Metrasens Ultra™ is the most advanced ferromagnetic detection system for use in zone 2 screening. Highly sensitive and precise, Ultra is capable of detecting the smallest ferrous objects with precise location identification, facilitating your secondary screening process and improving the overall efficiency and reliability of your patient screening practices.

DESIGNED TO REDUCE ALARM FATIGUE

Metrasens Ultra is powered by Metrasens' software-based technology platform, Xact ID, which processes sensor inputs digitally into data, filtering environmental noise to reduce nuisance alarms. In addition to its always-on, standard screening mode, Metrasens Ultra also features a Touch-to-Screen mode, which allows you to easily screen patients only as needed, in seconds. While not in use, Ultra won't produce visual or audible alerts, reducing the probabilities of alarm fatigue.

HIGHLY SENSITIVE AND PRECISE   FAST AND EASY TO USE   TOUCHLESS AND SAFE

Metrasens Ultra

THE MOST EFFICIENT AND RELIABLE ZONE 2 PATIENT SCREENER.

SECURE, ACTIONABLE DATA

- Auto capture data to improve operations
- Event logging and operational statistics

MULTIPLE SCREENING MODES

- Always on or touch-to-screen modes offer flexibility for your preferred workflow
- Reduces the risk of alarm fatigue

NOISE FILTERING

- Digital signal processing filters environmental noise to reduce nuisance alarms
- Eliminates interferences to screen at high sensitivity level with precision

5-ZONE LOCATION IDENTIFICATION

- Zone indication without compromise to detection performance
- LED light indicators at the height level of the ferrous object
- Improves secondary screening efficiencies

INTUITIVE INTERFACE

- Simple touch-screen operation
- Total control over visual and audible alerts
- Auto lock and optional PIN code protected access
